

A World Leader

With over 80 years experience in power generation and belonging to the Cummins Inc. group of companies with a turnover in excess of \$6BN, we can provide whatever power you need, from a simple 9kW back-up supply to a comprehensive 30MW power station.

Powerful Products

The right product for the customer, whether for standby or prime applications, open, enclosed or sound attenuated.

All elements of Cummins Power Generation sets are designed from the start, to work together, to maximise efficiency, to provide lower running costs combined with straightforward service and maintenance facilities.

A high quality product, coupled with unrivalled, reliability, gives industry leading power solutions.

C250 D5 OpenSet

C11 D5 OpenSet

Powerful Partners

With a world-wide distribution network across 130 countries, approaching 500 distributors, 5,000 dealers and 5,800 service locations, we have the capability and experience to support our products wherever they are operating. Specialised training, available from purpose built facilities, on-site courses and computer based distance learning programs, ensures our technicians are trained to the very highest standards.

The expertise of a world leader

OpenSet™

11-55 kVA

SilentPower™

The new OpenSet concept from Cummins Power Generation provides all necessary features to limit the installation costs. Thus the OpenSet is equipped with high capacity fuel tank, starting batteries, manual/autostart controller (PCC 1300), 4 pole circuit breaker and industrial loose silencer.

The base frame provides full bunding and 4 direction handling capabilities by fork-lift truck or pallet jack.

The Cummins Power Generation SilentPower concept has been designed to meet or exceed the future European legislation 2000/14/EC Step 2006. The design is modular so fits directly to the OpenSet for competitiveness and to provide flexibility for manufacturing and availability. The OpenSet bunding and handling features are included but there is an added single point lift as standard.

High Horse Power 700-3300 kVA PowerBox™

For the High Horse Power Set, Cummins Power Generation offers a level of build which allows the possibility to configure the genset according to the requirements of the customer. The PowerCommand Controller is included and a large number of options are available including remote cooling, see information on page 12/13.

The PowerBox is a new concept from Cummins Power Generation and is available in two sizes and noise levels compliant with EC regulations 2000/14/EC. The PowerBox is CSC designed with 4 ISO corner and pole slots for shipment. Within the Silentpower design the PowerBox integrates all OpenSet specified accessories such as fuel tank, residential silencer, batteries and circuit breaker.

PRIME POWER RATING (PRP) – (for variable load applications)
 These ratings are applicable for supplying electrical power to variable load applications in lieu of commercially available power. A 10% overload power is available for one hour in any twelve hour period.

STANDBY POWER RATING (ESP) – (for variable load applications)
 These ratings are applicable for supplying emergency power for the duration of a utility power interruption where a reliable utility supply exists. No overload, utility parallel or negotiated outage operation capability is available at this rating.

All ratings are based on the following reference conditions:
 – Ambient temperature – 27°C
 – Altitude above sea level – 150 metres
 – Relative humidity – 60%
 Declared output power may be subject to derate if the above conditions are exceeded. Short term parallel operation with the utility, for load transfer purposes only, is permitted with all ratings.

For comprehensive conditions of application including COP and LTP, please refer to factory.

This document lists the main specifications and options of the genset. For other customer specified requirements please consult your nearest Cummins Power Generation distributor.

PowerCommand™

Power Electronics

Industry Leading Controls

Digital System Controls

Today, having a reliable, flexible, and easy-to-operate on-site power generation system is more important than ever before.

Whether your on-site power system is relied on for prime power, emergency backup, or for taking advantage of power sharing opportunities with your local utility, the key to getting all these benefits and more is the advanced PowerCommand Digital Paralleling System from Cummins Power Generation.

No other system offers all the benefits you get with PowerCommand Digital Paralleling. From true digital control of startup, synchronization, and bumpless power transitions – to sophisticated diagnostics, remote monitoring, and networkability – PowerCommand Digital Paralleling Systems are without equal.

Digital Paralleling

In less than 15 seconds, PowerCommand Digital Paralleling Systems can parallel and synchronize all your diesel and multiple gas-engine generator sets with the utility. And it's the same fast, consistent performance each and every time.

Only PowerCommand has been designed from the ground up as a true distributed logic concept: paralleling controls mounted on the gensets, low or medium voltage power section, and the Digital Master Control for supervisory functions.

Combine these advantages with a smaller footprint, lower system costs, and easy-to-use intuitive interfaces that share the same data throughout the system, and you've got state-of-the-art performance that is unsurpassed.
